PDF HELPER

1. DOWNLOAD & INSTALL THE FONTS

I only use free font to add some style to my resume, avoiding the classical. The first step is to download the typography *(absolutly freely)* used in this particular resume :
- http://www.dafont.com/bebas-neue.font
- http://www.fontsquirrel.com/fonts/bitter

Then second step is to **install the font file**, for that it is quite simple :
Click on the «Download» button, save the zip somewhere on your hard disk, go to the place where it is saved, double-click on the zip to open it, then either click on «Extract all files» or drag and drop the files elsewhere from the zip window (hold down the CTRL key to select several files at once)
For the 20th century versions of Windows you must install an unzip tool first.

Then right clic on the .ttf file and select «install». Congratulations, you've done it !

2. ADAPTING : SKILLS GAUGE

- Select the Blue Gauge
- Go to the «Drawing Tool» then «Format» on the top menu.
- On the right find the «size» menu and modify the lenght.

3. BE YOURSELF, BE CRITICAL.

Usually your resume will last 6 to 10 seconds in the recuiter's hands it suggest that it's even more critical to have an eye-catching resume and to make the most of the six seconds you are afforded. But that doesn't mean form is more important than content ! Be critical to this template, rename, delete, modify.. Seek advices from your surroundings .

Best luck in your job hunt !
If you need anything, like advices, another file form, or just to tell me that you've found a job, just send me an inbox, i'd be happy to hear about your story.

- Clement.
