

# INSTRUCTIONS

DESIGNED BY  
JEREMY MURA

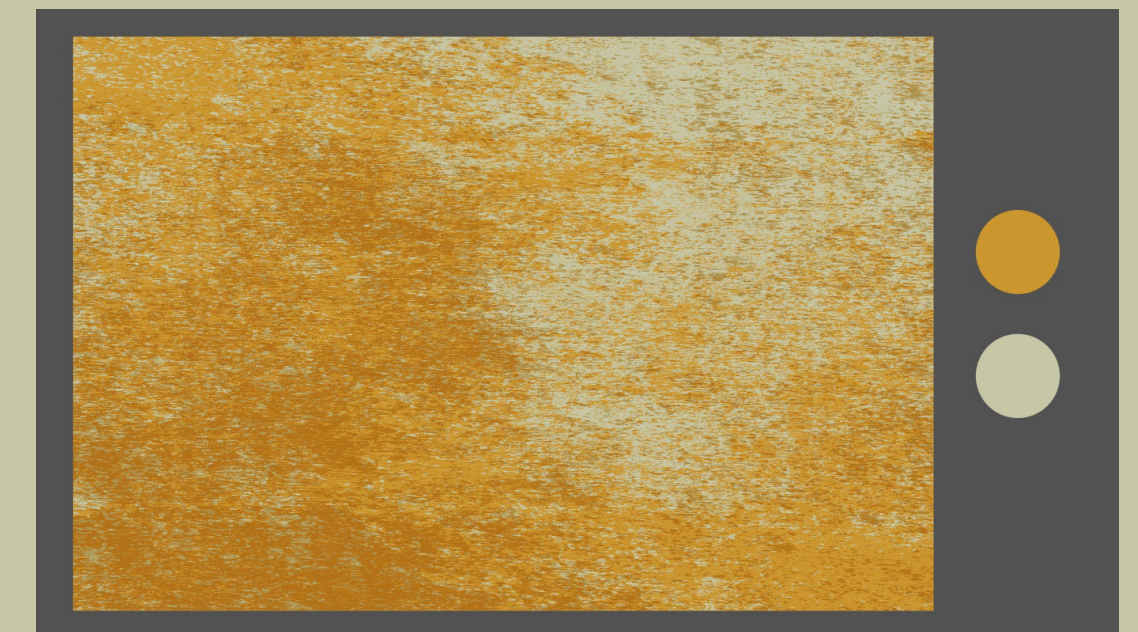

## PLACE OR DRAG & DROP TEXTURES

First, unzip the grunge texture folder and you will have all the textures in one folder. You can **drag and drop them into your artwork** or **press shift ctrl/cmd + p** to place and select the texture you want.

## CHANGING TEXTURE COLORS

Select the texture you want and **press I for the eye dropper tool** and then **just left click on any color**. You can also click on color swatches in your swatch panel.

## LAYERING TEXTURES

Layering textures are easy with tiffs, you can just **stack them on top of each other** to get some creazy grunge effects.
